

Energy Mentoring Service

For most businesses, an in-house energy manager is key to unlocking big & persistent energy savings, however, this is not usually an option for all but the largest organisations.

Our energy mentoring service, UtilityAssist can be thought of as your “virtual” energy manager.

www.envisij.com

Energy mentors

Work with you on an on-going basis. Their goal is simple. Help you reduce your energy costs, consumption, peak demand & carbon emissions.

Energy saving targets are set at an early stage of the partnership. Using proven methodology, energy consumption/cost reductions of 10-30% are common in the first year.

Whilst energy savings are the primary goal, our energy services programme also provides a range

of other features. Ongoing, 24/7 energy monitoring dashboard; regular management reports; rich energy use analytics to support your business/ investment decision making; verification of retrofit investments, quantification of energy savings and ongoing support from our team of Energy Mentors all form part of our UtilityASSIST service.

Energy mentoring benefits

Why working with envisij gives you more than great energy management technology.

20% Year on year support designed for ongoing energy savings.

Managed service allows your staff to concentrate on what they're good at.

24/7/365 real-time energy monitoring, always-on, at your fingertips.

Quantifiable data to enable accurate measurement of energy savings & ROI plans.

Reduce carbon emissions year on year.

Reduce maintenance costs & extend equipment life.

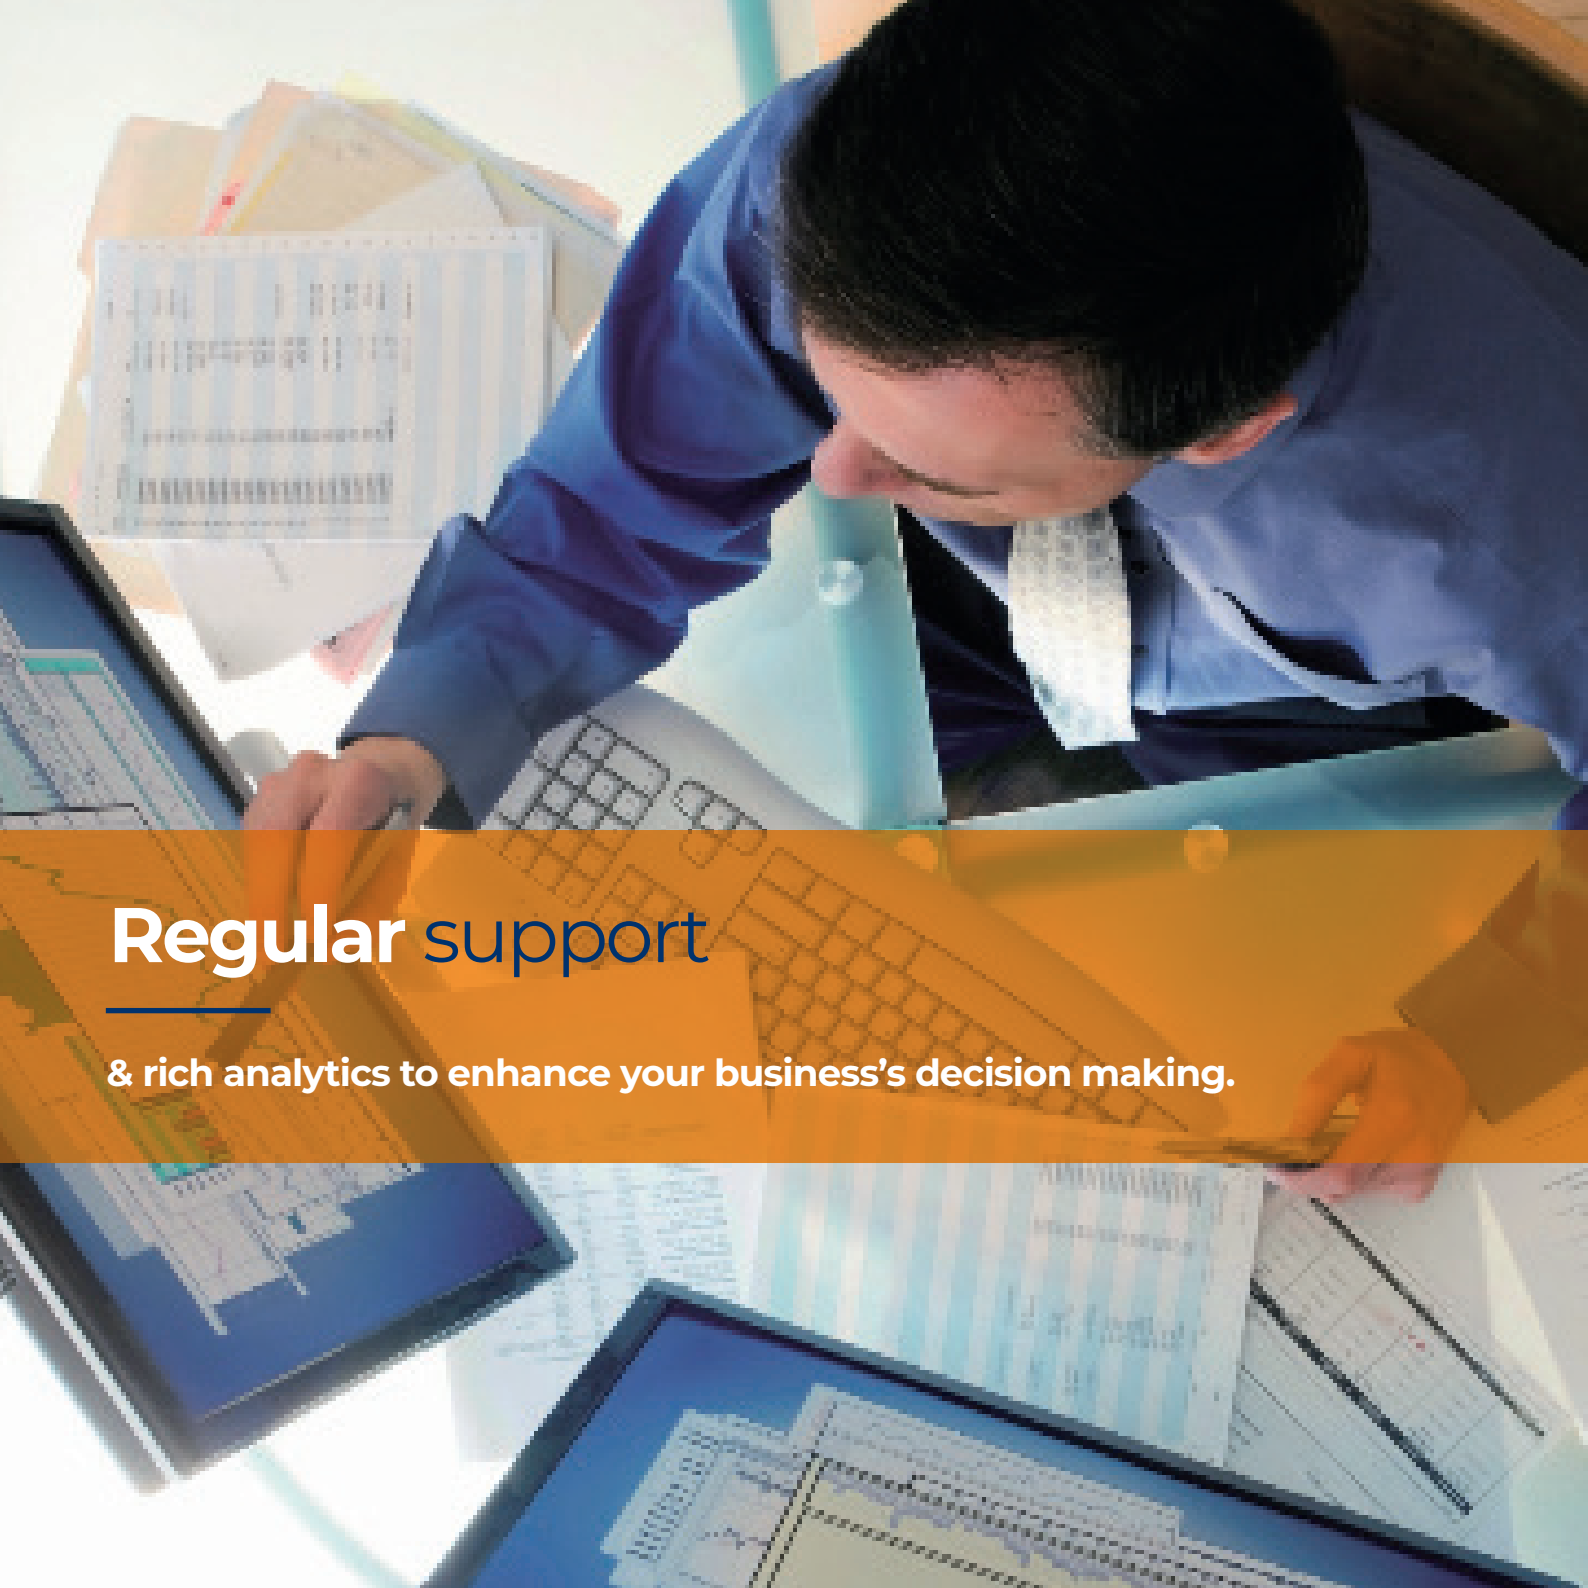

Independent energy management reports.

Informative monitoring reports to understand your electricity demand in detail.

Understand how much energy your operation maybe wasting out of working hours.

Regular support

& rich analytics to enhance your business's decision making.

How OPTIMUM works

Envisij energy management processes optimise energy efficiency and savings. The ultimate aim is to help your businesses achieve maximum energy efficiency with minimum energy wastage, leakages and cost.

To help Envisij to engage and work with a client, we're aware that both parties need to understand where the client is at present with energy efficiency measures, where their energy is being consumed, how it is being consumed, and importantly when it is being consumed. Once we understand this we can then see where energy is potentially being wasted, when, by what and most importantly how much.

To achieve this we conduct an Energy Management Survey as part of our OPTIMUM level service. This service builds on the data provided by our suite of Dashboard and Analytics software and work done by our STANDARD & PREMIUM Mentoring services.

1

The 1st stage of our OPTIMUM process is to carry out an in-depth site survey to gather information and understand how your facility operates. Additional facilities can be added as required.

2

The 2nd stage reviews the data, which enables us to produce and present a report with a breakdown of where your energy is being consumed, areas of wastage identified and recommendations of how to prevent or reduce this energy wastage. This will include applicable energy savings solutions to your business. We also supply an overview on potential financial and carbon emission savings, costs of solutions and payback times.

The OPTIMUM Survey Report enables both parties now to understand what the energy situation is, and allows stage three to commence, which is to develop an energy plan – which tie's in line with the your business plan and energy reduction goals. Together we would outline the achievable targeted percentage of savings over years 1, 2 and beyond.

If you would like to take control of your energy costs and rein in your energy waste, then contact Envisij today to review which of our Energy Services packages are right for you and your enterprise.

UtilityASSIST overviewed

UtilityAssist, STANDARD. Web/phone based, inc. Energy Dashboard (energy saving portal) & 2 quarterly reports based on 3 & 6 months of energy consumption. STANDARD Audits identify standout no-cost and low-cost energy saving opportunities, consumption analysis and a general view of potential capital improvements.

UtilityAssist, PREMIUM. Demand & ROI analysis that identifies no-cost & low-cost opportunities, & also provides efficiency recommendations in line with your financial plans & potential capital-intensive energy savings opportunities. PREMIUM includes in-depth analysis of energy costs & usage and building characteristics & a refined survey of how energy is used in monitored buildings.

UtilityAssist, OPTIMUM. Detailed Analysis of Capital-Intensive Modification Audits (sometimes referred to as an “investment grade” audit) provide solid recommendations and financial analysis for major retrofitting/modification investments. In addition to Standard and Premium Audits, OPTIMUM audits include conservation opportunities, projected investments, savings & ROI(s) and engineering analysis for both gas and electricity use.

“Our mission is to accelerate the move to a sustainable, low carbon future - today, that means leaders setting net zero pathways and everyone taking steps to reduce their environmental impact”

Tom Delay, Chief Executive, Carbon Trust
